## Abstract

Based on studies conducted between 1976 and 2012 as well as previously unpublished records, the known spider fauna of Maine, United States of America, is boosted from 154 species (Procter 1946) to 677 species in 33 families and 250 genera. Most records were compiled by the senior author, but we also include the first published records of species collected by earlier workers. Species richness per family ranges widely, with Linyphiidae first (228), Salticidae second (58) and Theridiidae third (57). Twelve families are represented by a single species each. Foraging guild composition is skewed in favor of web spinners, largely due to linyphiid richness. Additional spatial and temporal sampling in diverse habitats will likely add to the number of species known to occur in Maine.

Keywords: Maine, spiders, invertebrate fauna

## Introduction

We provide the first reasonably comprehensive checklist of spider families, genera, and species that have been collected in Maine, United States of America. The senior author (DTJ) began collecting and recording the spiders of Maine in 1976. The only other list of spiders in Maine was compiled by William Procter in 1946 and comprised 154 species from Mount Desert Island in Hancock County. Other collectors have spent some time in Maine and published their finds but never published a list specific to the State. Between 1976 and 2012 with some help from a network of spider taxonomists, DTJ identified 71,000 Maine specimens to species.

Most specimens were collected by DTJ himself or through his work with Franklin Graham on the Spiders of Milbridge, Washington County Maine (Jennings and Graham 2007) and Nancy Sferra on the spiders of the Waterboro, York County pine barrens. Many other specimens came from various University of Maine research projects (particularly on spruce budworm and blueberry production, and many graduate student projects), the Maine Forest Service bark beetle and woodborer traps, a spider Bioblitz held in Acadia National Park, Winter Harbor, Hancock County in 2007, as well as material sent in by curious collectors.

Spiders were collected in all sixteen Maine counties from habitats ranging from all types of forested stands to blueberry fields, potato fields, bogs, fens, gravel pits, backyards, mountaintops, coastal beaches and rocky shores. Numbers are skewed toward Washington, Penobscot, and York Counties. DTJ did much of his collecting in Penobscot County and it is home to the University of Maine and two experimental forests. Milbridge in Washington County has been the site of extensive collecting (Jennings and Graham 2007) and the University of Maine has led numerous research projects in the blueberry barrens and spruce/fir forests in this coastal county. York County is home to the Waterboro barrens, extensively surveyed in the 1980's.

Almost half the specimens were collected from pitfall traps. Other methods of collection were sweeping and beating foliage, processing litter using Berlese funnels, Lindgren funnel traps, flight intercept traps, visual survey, drop pans, and branch sampling. A few spiders were caught using emergence traps, tree wraps, and sticky traps as well as at lights.

Spiders were identified using available primary taxonomic literature as well as regional field guides. All relevant spider taxonomic literature is available through the World Spider Catalog Association (World Spider Catalog 2020). Ubick *et al.* (2017) have provided the primary reference for the identification of North American spiders. Close examination of the male pedipalps and/or the female epigynum found only in mature adults are needed for species determination. Spider nomenclature (families, genera, and species) follows the World Spider Catalog.

Identified specimens from this study have been deposited in the permanent arachnid collections of the following institutions: The American Museum of Natural History, New York, NY; the Museum of Comparative Zoology, Harvard University, Cambridge, MA; and the Canadian National Collection of Insects and Arachnids, Biosystematics Research Centre, Ottawa, ON. In addition, a few specimens collected during the 2007 Bioblitz at Schoodic Peninsula, Acadia National Park were deposited at the Park Headquarters, Mount Desert Island, ME. Some specimens not identified to species were sent to specialists for further study and remain in the collections of those specialists or the institutions with which they are or were affiliated. For example, undetermined specimens of *Agyneta* were sent to P.J. van Helsdingen, of *Lophomma* and other erigonine linyphiids to M.J. Draney, of other

linyphiids to C.D. Dondale, and of theridiids to H.W. Levi. A database of collection information on the majority of spiders identified by (or for) DTJ is available from the Forest Health and Monitoring Division of the Maine Department of Agriculture, Conservation and Forestry.

All spider taxa (families, genera, and species) are listed alphabetically with counties (Figure 1) where specimens have been found listed after the species. All taxa known to have been collected in Maine are recorded. Species that were not identified or examined by DTJ but are recorded in the literature are indicated by a reference after italicized *counties* where the spiders were found. Other reports are listed only if DTJ did not find the spider in a particular county. In those instances, only the first known report of a species in a county is cited with the citation following the list of counties. We have made an effort to review all literature records of Maine spiders but recognize that our review is not exhaustive.

Introduced non-native species that appear to be established are marked with an asterisk (\*). Establishment is based on specimens being collected outside of buildings. Non-native species that have been identified from specimens collected in Maine but have little chance of establishment in the State are marked with two asterisks (\*\*). These latter species are not included in the count of Maine spiders nor do we list the counties in which they have been collected.

Genus *Agelenopsis* Giebel, 1869

*Agelenopsis actiosa* (Gertsch & Ivie, 1936)

Cumberland, Hancock, Kennebec, Penobscot, Washington, York

*Agelenopsis emertoni* Chamberlin & Ivie, 1935

Franklin, Hancock, Kennebec, Knox, Penobscot, York

*Agelenopsis naevia* (Walckenaer, 1841)

*Cumberland, Hancock, Knox, Oxford, Piscataquis, York* (Hentz 1875; Procter 1933; Bishop 1923;  
Blake 1927; Chamberlin & Ivie 1941)

*Agelenopsis pennsylvanica* (C. L. Koch, 1843)

*Oxford* (Chamberlin & Ivie 1941)

*Agelenopsis potteri* (Blackwall, 1846)

All Counties

*Agelenopsis utahana* (Chamberlin & Ivie, 1933)

All Counties

Genus *Coras* Simon, 1898

*Coras aerialis* Muma, 1946

Aroostook, Franklin, Lincoln, Penobscot, Piscataquis, York

*Coras juvenilis* (Keyserling, 1881)

Cumberland, Franklin, Hancock, Lincoln, Oxford, Penobscot, Somerset, York

*Coras lamellosus* (Keyserling, 1887)

Aroostook, Penobscot, Somerset, Washington, York

*Coras medicinalis* (Hentz, 1821)

Aroostook, *Lincoln, Oxford, Penobscot, Piscataquis, York* (Bryant 1908)

*Coras montanus* (Emerton, 1890)

Aroostook, Franklin, Hancock, Penobscot, Piscataquis, Somerset, Washington

Genus *Eratigena* Bolzern, Burckhardt, & Hänggi, 2013

*\*Eratigena atrica* (C. L. Koch, 1843)

Genus *Tegenaria* Latreille, 1804

*\*Tegenaria domestica* (Clerck, 1757)

Aroostook, Franklin, Hancock, Kennebec, Knox, Lincoln, Penobscot, Sagadahoc, Waldo, Washington,  
York

Genus *Wadotes* Chamberlin, 1925

*Wadotes calcaratus* (Keyserling, 1887)

Aroostook, Hancock, Kennebec, Penobscot, Piscataquis, Somerset, Washington, York

*Wadotes hybridus* (Emerton, 1890)

Aroostook, Kennebec, Lincoln, Penobscot, Waldo, York

### FAMILY AMAUROBIIDAE

Genus *Amaurobius* C. L. Koch, 1837

*Amaurobius borealis* Emerton, 1909

Aroostook, *Cumberland, Hancock, Kennebec, Lincoln, Oxford, Penobscot, Piscataquis, Somerset, Waldo,*  
*Washington, York* (Emerton 1909)

*\*Amaurobius ferox* (Walckenaer, 1830)

Hancock, York

Genus *Callobius* Chamberlin, 1947

*Callobius bennetti* (Blackwall, 1846)

Aroostook, Cumberland, Franklin, Hancock, Knox, Lincoln, Oxford, Penobscot, Piscataquis, Sagadahoc,  
Somerset, Washington, York

Genus *Cybaeopsis* Strand, 1907

- Cybaeopsis euopla* (Bishop & Crosby, 1935)  
 Aroostook, Hancock, Knox, Penobscot, Piscataquis, Washington  
*Cybaeopsis tibialis* (Emerton, 1888)  
 Aroostook, Penobscot, Piscataquis, Washington (Emerton 1914)

**FAMILY ANYPHAENIDAE**

- Genus *Anyphaena* Sundevall, 1833  
*Anyphaena celer* (Hentz, 1847)  
 Cumberland, York  
 Genus *Hibana* Brescovit, 1991  
*Hibana gracilis* (Hentz, 1847)  
 York  
 Genus *Wulfila* O. Pickard–Cambridge 1895  
*Wulfila saltabundus* (Hentz, 1847)  
 Androscoggin, Cumberland, Kennebec, Penobscot, Washington, York

**FAMILY ARANEIDAE**

- Genus *Acanthepeira* Marx, 1883  
*Acanthepeira stellata* (Walckenaer, 1805)  
 Hancock, Penobscot, Sagadahoc, Somerset, Waldo, Washington  
 Genus *Aculepeira* Chamberlin & Ivie, 1942  
*Aculepeira carbonarioides* (Keyserling, 1892)  
 Piscataquis (Emerton 1914)  
 Genus *Araneus* Clerck, 1757  
*Araneus alboventris* (Emerton, 1884)  
 Cumberland, Franklin (Bryant 1908)  
*Araneus bicentenarius* (McCook, 1888)  
 Aroostook, Franklin, Hancock, Kennebec, Penobscot, Washington  
*Araneus bivittatus* (Walckenaer, 1841)  
 Penobscot  
*Araneus bonsallae* (McCook, 1894)

- Genus *Bassaniana* Strand, 1928
- Bassaniana utahensis* (Gertsch, 1932)  
 Androscoggin, Aroostook, Cumberland, Franklin, Hancock, Kennebec, Knox, Oxford, Penobscot, Sagadahoc, Somerset, Waldo, Washington, York
- Bassaniana versicolor* (Keyserling, 1880)  
 Cumberland, Hancock, Lincoln, Penobscot, Sagadahoc, Waldo, York (Bryant 1908; Procter 1938; Gertsch 1953)  
 Genus *Mecaphesa* Simon, 1900
- Mecaphesa asperata* (Hentz, 1847)  
 Hancock, Kennebec, Penobscot, Piscataquis, Waldo, Washington, York (Procter 1933; Blake 1927)
- Mecaphesa carletonica* (Dondale & Redner, 1976)  
 Washington, York
- Mecaphesa celer* (Hentz, 1847)  
 Kennebec  
 Genus *Misumena* Latreille, 1804
- Misumena vatia* (Clerck, 1757)  
 All Counties

- Genus *Misumenoides* F. O. Pickard–Cambridge, 1900  
*Misumenoides formosipes* (Walckenaer, 1837)  
 Androscoggin, Cumberland, *Hancock*, York (Procter 1933)
- Genus *Ozyptila* Simon, 1864  
*Ozyptila americana* Banks, 1895  
*Hancock*, Penobscot (Procter 1946)  
*Ozyptila distans* Dondale & Redner, 1975  
 Aroostook, Franklin, *Hancock*, Lincoln, Penobscot, Piscataquis, Sagadahoc, Somerset, Washington, York  
*Ozyptila georgiana* Keyserling, 1880  
 Penobscot  
*Ozyptila gertschi* Kurata, 1944  
 Aroostook, Penobscot, Piscataquis  
*Ozyptila praticola* (C. L. Koch, 1837)  
 Cumberland, *Hancock*  
 Genus *Tmarus* Simon, 1875  
*Tmarus angulatus* (Walckenaer, 1837)  
 Cumberland, *Hancock*, Kennebec, Knox, Oxford, Penobscot, Waldo, Washington, York  
 Genus *Xysticus* C. L. Koch, 1835  
*Xysticus alboniger* Turnbull, Dondale & Redner, 1965  
*Hancock*, Penobscot, Piscataquis, Sagadahoc, Waldo, Washington, York  
*Xysticus ampullatus* Turnbull, Dondale & Redner, 1965  
*Hancock*, Lincoln, Penobscot, Washington, York  
*Xysticus bicuspis* Keyserling, 1887  
 Cumberland Bryant (1908)  
*Xysticus britcheri* Gertsch, 1934  
 Penobscot, Piscataquis  
*Xysticus canadensis* Gertsch, 1934  
*Hancock*, Piscataquis  
*Xysticus chippewa* Gertsch, 1953  
 Kennebec, Penobscot, Piscataquis, Washington  
*Xysticus discursans* Keyserling, 1880  
 Aroostook, Cumberland, Penobscot, Piscataquis, Sagadahoc, Somerset, Waldo, Washington (Bryant 1930)  
*Xysticus elegans* Keyserling, 1880  
 Androscoggin, Aroostook, Cumberland, Franklin, *Hancock*, Kennebec, Lincoln, Oxford, Penobscot, Piscataquis, Sagadahoc, Somerset, Washington, York  
*Xysticus ellipticus* Turnbull, Dondale & Redner, 1965  
 Penobscot, Somerset, Washington  
*Xysticus emertoni* Keyserling, 1880  
 Aroostook, Cumberland, Franklin, *Hancock*, Kennebec, Lincoln, Penobscot, Piscataquis, Sagadahoc, Somerset, Washington, York (Bryant 1908)  
*Xysticus ferox* (Hentz, 1847)  
 Androscoggin, Aroostook, Cumberland, *Hancock*, Kennebec, Lincoln, Penobscot, Sagadahoc, Somerset, Waldo, Washington, York  
*Xysticus fervidus* Gertsch, 1953  
 Washington  
*Xysticus fraternus* Banks, 1895  
 Androscoggin, Cumberland, York  
*Xysticus gulosus* Keyserling, 1880  
 Cumberland, *Hancock*, York (Bryant 1908; Procter 1933)  
*Xysticus luctans* (C. L. Koch, 1845)  
 Cumberland, *Hancock*, Kennebec, Lincoln, Penobscot, Waldo, Washington, York (Bryant 1908; Procter 1933)  
*Xysticus luctuosus* (Blackwall, 1836)  
 Aroostook, Piscataquis, Washington

*Xysticus obscurus* Collett, 1877

Piscataquis

*Xysticus pallax* O. Pickard–Cambridge, 1894

*Cumberland, Hancock, Lincoln, Penobscot, Washington, York* (Gertsch 1939; Procter 1946)

*Xysticus punctatus* Keyserling, 1880

*Androscoggin, Aroostook, Cumberland, Hancock, Kennebec, Knox, Oxford, Penobscot, Piscataquis, Somerset, Washington, York*

*Xysticus triguttatus* Keyserling, 1880

*Androscoggin, Aroostook, Hancock, Knox, Lincoln, Penobscot, Sagadahoc, Washington, York*

*Xysticus winnipegensis* Turnbull, Dondale & Redner, 1965

*Penobscot, Somerset, Washington, York*

#### **FAMILY TITANOECIDAE**

Genus *Titanoeca* Thorell, 1870

*Titanoeca americana* Emerton, 1888

*Hancock, Washington, York* (Procter 1933)

#### **FAMILY TRACHELIDAE**

Genus *Trachelas* L. Koch, 1872

*Trachelas tranquillus* (Hentz, 1847)

*Specific locality not given* (Dondale & Redner 1982)

#### **FAMILY ULOBORIDAE**

Genus *Hyptiotes* Walckenaer, 1837

*Hyptiotes cavatus* (Hentz, 1847)

*Cumberland, Hancock, Kennebec* (Hentz 1875; Procter 1933)

*Hyptiotes gertschi* Chamberlin & Ivie, 1935

*Washington*

Genus *Uloborus* Latreille, 1806

*Uloborus glomosus* (Walckenaer, 1841)

*Androscoggin, Knox, Oxford, Washington*

The following are a few of the species are thought to occur in Maine but no specimens or published reference were found for them.

#### FAMILY LINYPHIIDAE

*Acanthoneta furcata* (Emerton, 1913)

Quite likely to occur in Maine, probably at high elevation; found in NH, QC, VT, and Newfoundland.

*Tapinocyba prima* Dupérré & Paquin, 2005

Quite likely to occur in Maine, probably at high elevation or in boreal forest.

#### FAMILY MYSMENIDAE

*Mysmena quebecana* Lopardo & Dupérré, 2008

Possibly in Maine as it is found in QC close to the VT border.

#### FAMILY SALTICIDAE

*Synemosyna formica* Hentz, 1846

Possibly in Maine as it is fairly common in CT.

#### FAMILY THERIDIIDAE

*Latrodectus variolus* Walckenaer, 1837

Possibly in Maine as it is fairly common in New England including NH and VT as well as ON. *Thymoites marxi* (Crosby, 1906)

Possible northern range extension.

#### FAMILY THOMISIDAE

*Misumessus oblongus* (Keyserling, 1880)

Possibly in Maine as it is fairly common in MA.

## Discussion

This checklist includes the names of 677 species of spiders found in Maine. These species are in 250 genera and 33 families. Species richness per family ranges widely, with the Linyphiidae first (228), the Salticidae second (58) and the Theridiidae third (57). Twelve families are represented by a single species. Assessment of the actual fauna will require additional sampling, both spatially and temporally, in diverse habitats and strata.

By comparison, Kaston (1981) estimated that the spider fauna of Connecticut comprised 478 species of 30 families. He also estimated that the spider fauna “In all New England” comprised 683 species of 31 families. Our estimate for Maine alone comes close to Kaston’s estimate for all of New England suggesting that Maine’s varied habitats hold a wide variety of spider fauna rivaling that of the nearby states. Maine also lies further north so that more of the northerly species may be found in Maine than in other states. Although a large proportion of specimens used in this project were collected from softwoods and blueberry barrens, a wide variety of habitats were sampled at some level. We suggest that future spider inventories of Maine focus on the state’s unique, natural features as summarized by Bennett (1989).

Not surprisingly, the foraging guild composition of the Maine fauna is skewed in favor of web spinners, largely due to linyphiid richness. This is in line with spider faunal lists from Quebec (Paquin et al 2001), Newfoundland (Pickavance and Dondale 2005) and Prince Edward Island (Bowden et al 2019). The salticids are the most species rich family of spiders in the world. Therefore, it is not surprising that it is the family with the second most species in Maine.

### Specimen Deposits

The spiders collected in Maine by the authors and their associates are deposited in the permanent arachnid collections of the following institutions: The American Museum of Natural History, New York, NY (AMNH); the Museum of Comparative Zoology (MCZ), Harvard University, Cambridge, MA; and, the Canadian National Collection (CNC) of Insects and Arachnids, Biosystematics Research Centre, Ottawa, ON. In addition, a few specimens collected during the 2007 Bioblitz at Schoodic Peninsula, Acadia National Park are deposited at the Park Headquarters, Mount Desert Island, ME.

The specimen deposits include three categories of determination: a) identified to species; b) identified to genus; and c) identified to family—genus and species unknown. Specimens of the latter two categories have been sent to specialists for further study. For example, undetermined species of *Agyneta* have been sent to P. J. van Helsdingen, The Netherlands; undetermined species of *Lophomma* and other erigonids to M. J. Draney, University of Wisconsin, Green Bay, WI; undetermined linyphiids to C. D. Dondale and J. H. Redner, (CNC); and undetermined theridiids to H. W. Levi, formerly at the Museum of Comparative Zoology, Harvard University, Cambridge, MA. The Maine Department of Agriculture, Conservation and Forestry: Maine Forest Service: Forest Health and Monitoring Division, holds a database of information on the majority of spiders identified by (or for) the first author.

## Acknowledgments

In 2006, the authors of this document along with Jonathan Mays, then of Maine Department of Inland Fisheries and Wildlife, met to discuss creating a Checklist of Maine Spiders based on a portion of the life’s work of Dr. Daniel Jennings. The Maine Forest Service and Maine Department of Inland Fisheries and Wildlife worked together to provide technical support to finish cataloging the more than 60,000 specimens collected for this project, freeing up Dr. Jennings to do the highly technical taxonomic work of identifying the thousands of spider samples. Maine Forest Service personnel provided years of assistance in collecting, labelling, and databasing specimens. Former students, both undergraduate and graduate, and experiment station colleagues also provided specimens and support. We are grateful to James E. Bird and Melvin W. Johnson of Fogler Library, University of Maine, Orono, for providing literature search and retrieval services. Thank you to Robb Bennett, Royal British Columbia Museum, for help in editing. We owe a special debt of appreciation to our families for their interest, patience, and support.
